

# Damaress

*Color and flavor united*

/// **Vegetables** by Bayer

[vegetables.bayer.com](http://vegetables.bayer.com)

**FULLRED** is the new line of De Ruiter varieties, it has its fruits with a deep red inside and outside. Thanks to its double dark red color, the FULLRED tomato appeals more to consumers, whether on the shelves or sliced on a plate. **FULLRED** is part of De Ruiter's strategy for added value; the objective is to bring to the market a portfolio of tomato varieties whose color and taste have been optimized, without compromising the characteristics for the producers.

# DAMARESS

*Tasty medium size fruit with intense red color and jointed calyx.*

## FEATURES

- High yield potential in the “flavoursome” medium truss segment
- °Brix potential of >5 throughout the season, depending on crop steering
- Uniform average fruit weight
- Strong setting throughout the season producing good fruit
- Jointed calyx
- Intense red colour, internally as well as externally
- IR: On resistance
- Not sensitive to BER
- Strong plant

## ADVICE

*Based on trials experience of the variety*

- Environment: Heated glasshouse
- Season: Year-round and lit crops
- Grafting: Superior vigour and generative rootstock such as Equifort
- Density: Planting at approximately 2.2 stems/m<sup>2</sup> and increasing to approximately 3.5 stems/m<sup>2</sup> for a year-round crop and maximum 3.8 stems/m<sup>2</sup> for lit crops.
- See below the recommended sowing, planting and harvesting calendar for year-round and lit crops
